

Answer to a) loops are printing the numbers with a leading blank, Integer.toString is the same as Integer.toString method

Answer to b) Yes the compiler shows the error: compilation unit needed, in my machine.

solution: I needed to add procedure name according to file name. So, I have added like -

```
procedure main is
begin
...
code
...
end
```

then the error gone.

but then two warning appeared.

Warning 1: loop range is null, loop will not execute

reason: as the loop range is 3 .. 1, it is invalid as there is no range values starting from 3 and ending at 1.

Warning 2: loop range is null, loop will not execute

reason: same as warning 1. same range problem.
